**GARDENING INDOORS  
ALL YEAR ROUND**

The Bruli Pantry Garden is an exciting new breakthrough in earthy gardening. Eager to do away with earthworms and rodents nibbling at his fresh herbs, a Kentucky farmer has developed a flawless new method of homegrown planting. The Bruli Pantry Garden has been uniquely designed to suit the needs of the farmer, the restaurateur, and especially the family at home. The benefits of gardening indoors are endless. Kitchen cupboards maintain consistent climate year-round, and with the installation of a small light and soil box, mom will be seasoning supper with...

is a special concept that may seem impractical, but this horticultural breakthrough is revolutionizing dinner plates all over the country already! No more sending the children to the back yard for basil just to find that it has been eaten by rodents. No more rain washing away the new harvest before full bloom. No more waiting for seasons to change to determine your crop. How does it work? A simple bulb that emits a pre-measured amount of light is installed in any cupboard to shine on your indoor garden just like the sun. Presets exist for all types of different indoor gardens. For a small extra fee, add the

Roses blooming out in natural daylight after being started in a Bruli Pantry Garden.

Add the plumbed indoor auto-irrigation feature and you'll never have to water your garden again! Forget using dehydrated onions or store-bought tomatoes...

**J. SMITH HEADS  
COUNTY PUSH FOR  
PEDESTRIAN  
CROSSWALKS**

During this Tuesday's joint session with both town and county representatives present, the debate centered around the proposed pedestrian crosswalk project. J. Smith, a high school maintenance man, is keen on the issue of safer street crossing. "The idea of children crossing the highway to get to school without a crosswalk is appalling and it must be changed," Smith argues. Last month, three pedestrians were almost hit by a vehicle while crossing the street.

dangers in further testing. This treaty is not the millennium. It will not resolve all conflicts, or cause the Communists to forego their ambitions, or eliminate the dangers of war. It will not reduce our need for arms or allies or programs of assistance to others. But it is an important first step—a step towards peace—a step towards reason—a step away from war.

Here is what this step can mean to you and to your children and your neighbors:

First, this treaty can be a step towards reduced world tension and broader areas of agreement. The Moscow talks have reached no agreement on any other subject, nor is this treaty conditioned on any other matter. Under Secretary Harriman made it clear that any nonaggression arrangements across the division in Europe would require full consultation with our allies and full attention to their interests. He also made clear our strong preference for a more comprehensive treaty banning all tests everywhere, and our ultimate hope for general and complete disarmament. The Soviet Government, however, is still unwilling to accept the inspection such goals require.

No one can predict with certainty, therefore, what further agreements, if any, can be built on the foundations of this one. They could include controls on preparations for surprise attack, or on numbers and type of armaments. There could be further limitations on the spread of nuclear weapons. The important point is that efforts to seek new agreements will go forward.

But the difficulty of predicting the next step is no reason to be reluctant about this step. Nuclear test ban negotiations have long been a symbol of East-West disagreement. If this treaty can also be a symbol—if it can symbolize the end of one era and the beginning of another—if both sides can by this treaty gain confidence and experience in peaceful collaboration—then this short and simple treaty may well become an historic mark in man's age-old pursuit of peace.

Western policies have long been designed to persuade the Soviet Union to renounce aggression, direct or indirect, so that their people and all people may live and let live in

as young and as peace-loving as our own has fought through eight wars. And three times in the last two years and a half I have been required to report to you as President that this Nation and the Soviet Union stood on the verge of direct military confrontation—in Laos, in Berlin, and in Cuba.

A war today or tomorrow, if it led to nuclear war, would not be like any war in history. A full-scale nuclear exchange, lasting less than 60 minutes, with the weapons now in existence, could wipe out more than 300 million Americans, Europeans, and Russians, as well as untold numbers elsewhere. And the survivors, as Chairman Khrushchev warned the Communist Chinese, "the survivors would envy the dead." For they would inherit a world so devastated by explosions and poison and fire that today we cannot even conceive of its horrors. So let us try to turn the world away from war. Let us make the most of this opportunity, and every opportunity, to reduce tension, to slow down the perilous nuclear arms race, and to check the world's slide toward final annihilation.

Second, this treaty can be a step towards freeing the world from the fears and dangers of radioactive fallout. Our own atmospheric tests last year were conducted under conditions which restricted such fallout to an absolute minimum. But over the years the number and the yield of weapons tested have rapidly increased and so have the radioactive hazards from such testing. Continued unrestricted testing by the nuclear powers, joined in time by other nations which may be less adept in limiting pollution, will increasingly contaminate the air that all of us must breathe.

Even then, the number of children and grandchildren with cancer in their bones, with leukemia in their blood, or with poison in their lungs might seem statistically small to some, in comparison with natural health hazards. But this is not a natural health hazard—and it is not a statistical issue. The loss of even one human life, or the malformation of even one baby—who may be born long after we are gone—should be of concern to us all. Our children and grandchildren are not merely statistics toward

nuclear weapons will not make the world safer for either side. Under this limited treaty, on the other hand, the testing of other nations could never be sufficient to offset the ability of our strategic forces to deter or survive a nuclear attack and to penetrate and destroy an aggressor's homeland.

We have, and under this treaty we will continue to have, the nuclear strength that we need. It is true that the Soviets have tested nuclear weapons of a yield higher than that which we thought to be necessary, but the hundred megaton bomb of which they spoke a years ago does not and will not change the balance of strategic power. The United States has chosen, deliberately, to concentrate on more mobile and more efficient weapons, with lower but entirely sufficient yield, and our security is, therefore, not impaired by the treaty I am discussing.

And the survivors, as Chairman Khrushchev warned the Communist Chinese, "the survivors would envy the dead." For they would inherit a world so devastated by explosions and poison and fire that today we cannot even conceive of its horrors.

It is also true, as Mr. Khrushchev would agree, that nations cannot afford in these matters to rely simply on the good faith of their adversaries. We have not, therefore, overlooked the risk of secret violations. There is at present a possibility that deep in outer space, that hundreds and thousands and millions of miles away from the earth illegal tests might go undetected. But we already have the capability to construct a system of observation that would make such tests almost impossible to conceal, and we can decide at any time whether such a system is needed in the light of the limited risk to us and the limited reward to others of violations attempted at that range. For any tests which might be conducted so far out in space, which cannot be conducted more easily and efficiently and legally underground, would necessarily be of such a magnitude that they would be extremely difficult to conceal. We can also employ new devices to check on the testing of

such risks in this treaty are small, the far greater risks to our security are the risks of unrestricted testing, the risk of a nuclear arms race, the risk of new nuclear powers, nuclear pollution, and nuclear war.

This limited test ban, in our most careful judgment, is safer by far for the United States than an unlimited nuclear arms race. For all these reasons, I am hopeful that this Nation will promptly approve the limited test ban treaty. There will, of course, be debate in the country and in the Senate. The Constitution wisely requires the advice and consent of the Senate to all treaties, and that consultation has already begun. All this is as it should be. A document which may mark an historic and constructive opportunity for the world deserves an historic and constructive debate.
